Meet Jean Hatfield...

He recently joined the Flexcell® team in June of 2018. After receiving a bachelor's degree in psychology at UNC-Asheville, he then earned his master's degree in biology at East Carolina University. He has worked in the biotechnology field for over a decade and has spent considerable time "under the hood" working with hepatocytes, stem cells, and adipocytes. Jean enjoys cooking, camping, and tennis but spends most of his free time playing games with his 7-year-old son.
